

ST. JUDE NEUROLOGICAL INSTITUTE & ADVANCED BRAIN CLINIC

Department of Clinical Neuroscience • Acute Ischemic Stroke & Neuro-Rehabilitation Discharge Summary

Patient Name:	Robert Langdon	Patient Code / MRN:	PT-3108
Date of Birth:	1962-09-18 (Age 62)	Gender:	Male
Primary Diagnosis:	Acute Left MCA Ischemic Infarction	Attending Physician:	Dr. Sarah Jenkins, MD
Admit Date:	2026-08-01	Discharge Date:	2026-08-14

CLINICAL PRESENTATION & EMERGENT MANAGEMENT

62-year-old male admitted through Emergency Department presenting with acute onset right-sided hemiparesis, facial droop, and expressive motor dysphasia starting 90 minutes prior to arrival (Last Known Normal: 08:30 AM). Initial NIHSS Score: 14. Emergency CT perfusion and angiogram confirmed acute thrombus in the left middle cerebral artery (M1 branch). Intravenous thrombolysis (Alteplase 0.9 mg/kg) administered within therapeutic window, followed by successful mechanical thrombectomy with TIC1 3 complete reperfusion.

DIAGNOSTIC FINDINGS & VASCULAR EVALUATION

- Brain MRI (Post-thrombectomy): Restricted diffusion in small left subcortical corona radiata, preserved cortical ribbon without hemorrhagic conversion.
- Carotid Doppler Ultrasound: Left internal carotid artery with 35% non-stenotic calcified atheromatous plaque; right ICA normal.
- Transthoracic Echocardiogram (TTE): Ejection fraction 58%, normal left ventricular systolic function, bubble study negative for patent foramen ovale (PFO).

HOSPITAL COURSE & FUNCTIONAL RECOVERY

Patient made substantial motor improvement over 14-day hospitalization. Speech fluency improved with intensive speech-language pathology (SLP). Discharge NIHSS Score reduced to 2. Modified Rankin Scale (mRS) upon discharge: 1 (independent in basic activities of daily living).

DISCHARGE MEDICATIONS & SECONDARY STROKE PREVENTION

- Aspirin 81 mg daily PO.
 - Clopidogrel (Plavix) 75 mg daily PO (Dual Antiplatelet Therapy for 21 days).
 - Atorvastatin (Lipitor) 80 mg daily at bedtime (Target LDL < 55 mg/dL).
 - Amlodipine 5 mg daily PO.
- Follow-up scheduled with Comprehensive Stroke Clinic in 30 days with repeat lipid panel.
